

Oracle EBS to APEX

Page Integration

What is EBS to APEX Integration?

EBS to APEX Page Integration is the process of connecting **Oracle E-Business Suite (EBS)** with **Oracle APEX (APEX)** to enable seamless navigation from EBS to APEX applications.

This integration allows users to access APEX pages directly from EBS menus while preserving user session, responsibility, and security context. It is commonly used to extend EBS functionality by developing modern, user-friendly interfaces and custom solutions in APEX without modifying core EBS components.

Accessing Oracle E-Business Suite Data:

The **XX_APEX_EBS_USER** view provides a secure, read-only window into the EBS FND_USER table, ensuring APEX applications access user data safely.

The following code for creating a view in the APPS schema:

```
CREATE OR REPLACE VIEW XX_APEX_EBS_USER (  
    user_id,  
    user_name,  
    start_date,  
    end_date,  
    description,  
    email_address,  
    user_guid,  
    person_party_id,  
) AS  
  
SELECT  
    user_id,  
    user_name,  
    start_date,
```

```

end_date,
description,
email_address,
user_guid ,
person_party_id
FROM fnd_user;

```

Give grant rights to the Custom schema (**XX_APEX**) from the **APPS** schema:

```
GRANT READ ON XX_APEX_EBS_USER TO XX_APEX.
```

```
GRANT READ on FND_RESPONSIBILITY_VL TO XX_APEX.
```

1.URL-Based Redirection to APEX Page

This method involves redirecting users from EBS to an APEX application using a URL configured in an EBS function.

APEX Configurations

1.1 Create Authentication Scheme:

Navigation: Shared Components > Authentication Scheme > Create

Name: FND_APEX_AUTHENTICATION

Type: Custom

Sentry Function: apps.fnd_apex.authentication

Make this Authentication Scheme as **Current Scheme**

Application 152 \ Shared Components \ Authentication Schemes \ Create / Edit

Authentication Scheme [Cancel] [Create Authentication Scheme]

Name

Name: FND_APEX_AUTHENTICATIONFND_API ⓘ

Scheme Type: Custom ⓘ

Settings

Sentry Function Name: apps.fnd_apex.authentication ⓘ

Invalid Session Procedure Name: ⓘ

Authentication Function Name: ⓘ

Post Logout Procedure Name: ⓘ

Enable Legacy Authentication Attributes: No ⓘ

Source

PL/SQL Code ⓘ

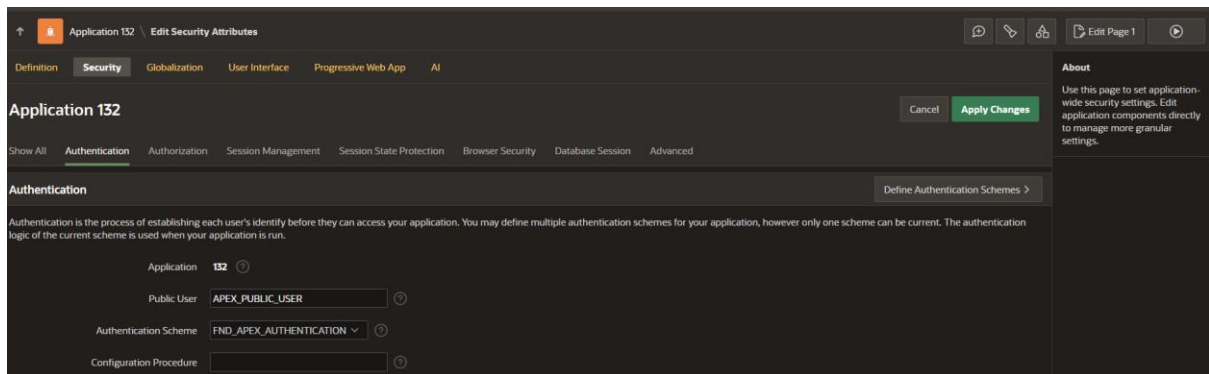

1.2 Configure Security Attributes

Shared Components > Security Attributes

Go to In **Authentication Tab**

Set the Authentication Scheme to the scheme created in the previous section.

Click Apply Changes to set authentication scheme.

1.3 Configure Session State:

Shared Components > Security Attributes > Session management

Enable Deep Linking

Session Timeout URL: <http://ebs-demo.privatesubnet.fouraaitest.oraclevcn.com/>

Session Idle Timeout URL: <http://ebs-demo.privatesubnet.fouraaitest.oraclevcn.com/>

1.4 Configure Browser Security:

Shared Components > Security Attributes > Browser Security

Embed in Frames : Allow From Same Origin

Referrer Policy : Strict-origin

HTTP Response Headers : Content-Security-Policy: frame-ancestors

<http://ebs-demo.privatesubnet.fouraaitest.oraclevcn.com/>;

EBS Configurations

Create Function:

Navigation: Application Developer > Application > Function

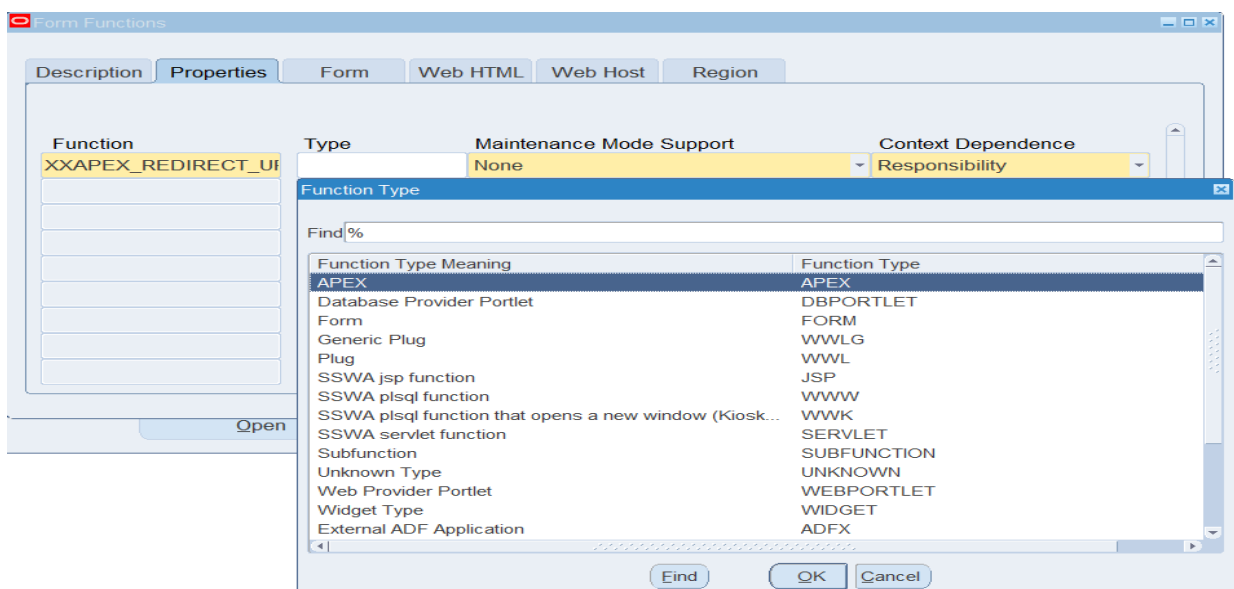

Function: Specify a code for the function , **XXAPEX_REDIRECT_URL_F**

User Function Name: Specify a name for the function, **Redirect to APEX Pages**

Function	User Function Name	Description
XXAPEX_REDIRECT_URL_F	Redirect to APEX Pages	

Click Properties Tab and select Type **APEX**

Function	Type	Maintenance Mode Support	Context Dependence
XXAPEX_REDIRECT_URL_F	None	None	Responsibility

Function Type Meaning	Function Type
APEX	APEX
Database Provider Portlet	DBPORTLET
Form	FORM
Generic Plug	WWLG
Plug	WWL
SSWA jsp function	JSP
SSWA plsql function	WWW
SSWA plsql function that opens a new window (Kiosk...	WWK
SSWA servlet function	SERVLET
Subfunction	SUBFUNCTION
Unknown Type	UNKNOWN
Web Provider Portlet	WEBPORTLET
Widget Type	WIDGET
External ADF Application	ADFX

In the Web HTML Tab Pass, the URL

Function	HTML Call	MDS Reference Path
XXAPEX_REDIRECT_UI	GWY.jsp?targetAppType=APEX&p=132:1:.....	

URL Structure - GWY.jsp

GWY.jsp (Gateway JSP) is a **Java Server Page in Oracle EBS** that acts as a **bridge between Oracle E-Business Suite and Oracle APEX**.

Understanding the URL structure for correct setup.

URL : GWY.jsp?targetAppType=APEX&p=132:1:.....

Segment	Example Value	Description
GWY.jsp		EBS Gateway Servlet - bridges EBS to external APEX app
targetAppType	APEX	Declares the target is an APEX application
targetPage	f?p=...	The full APEX URL to redirect to
APP_ID (132)	132	Your APEX Application numeric ID
PAGE	1 or LOGIN	Target page number or alias in APEX

Note: The Function Type value **APEX** is not appearing in the Function Properties list of values (LOV).

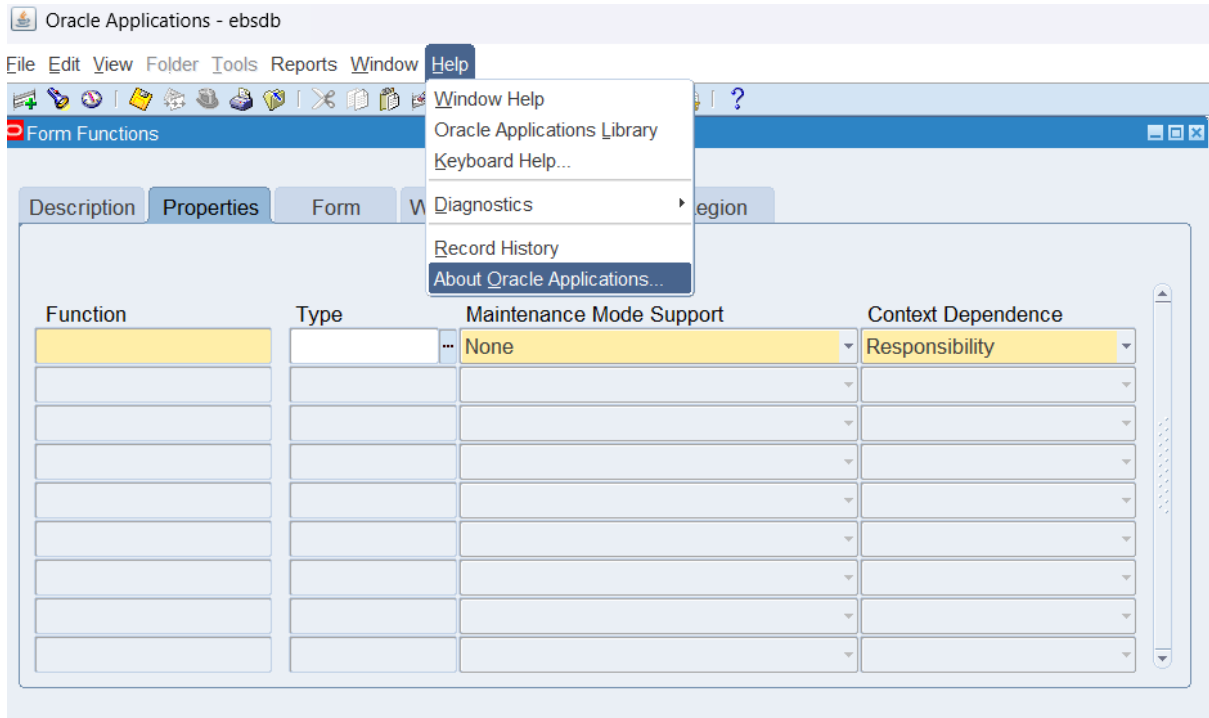

Verify whether the lookup value exists by executing the following query on the **FND lookup table**:

```

SELECT LOOKUP_TYPE, LOOKUP_CODE, MEANING, ENABLED_FLAG, ZD_SYNC , ZD_EDITION_NAME
FROM FND_LOOKUP_VALUES
WHERE LOOKUP_TYPE = 'FORM_FUNCTION_TYPE'
AND LOOKUP_CODE = 'APEX';

```

If exists but still not showed the LOV , Get the form file

Click About Oracle Applications

Go to the Current Form

1. Get the Form Name
2. Go the path in WinSCP and set the .FMB file
3. Check the LOV's Query condition
4. Recompile the form (.fmb) using **Oracle Forms Compiler**
5. Generate the corresponding .fmx file
6. Deploy (move) the compiled file to the **application server** under the appropriate directory (e.g., \$AU_TOP/forms/US)

The screenshot shows the 'Form Functions' window with the 'Properties' tab selected. The 'Maintenance Mode Support' dropdown is set to 'None' and 'Context Dependence' is set to 'Responsibility'. An 'About Oracle Applications' dialog box is open in the foreground, displaying application details for 'FNDFMFUN'.
